# Non-spring return damper actuators Electric Non-spring return actuators 

## Product Bulletin

The New Joventa Standard Series of Electric NonSpring Return Actuators provide control of dampers in HVAC Systems from 8 to 35 Nm rated torque.

These bidirectional actuators do not require a damper linkage and are easily installed on round shafts or square shafts.

An optional line voltage auxiliary switch kit can be field installed to indicate an end-stop position or perform switching functions within the selected rotation range.

■ Automatic Signal Input Detection model On/Off, Floating and Proportional Increase availability at distributors. Simplify retrofit.

- High speed actuator model

Allow applications in loop that require a quick response time.

- Optional Auxiliary Switch \& potentiometer feedback

Provides line voltage capable single Pole Double-Throw (SPDT) switch and $140 \Omega, 1 \mathrm{~K} \Omega, 2 \mathrm{~K} \Omega$ or $10 \mathrm{~K} \Omega$ feedback potentiometric.

- From 8 to 35 Nm Rated Torque

Provides high torque in a compact package size to expand the range of damper applications in HVAC systems.

- Self-Calibrating to Adjust Stroke

Eliminates need of complex calibration procedure when adjusting stops.
■ Electronic Stall Detection
Protects from overload at all angles of rotation. The actuator may be stalled anywhere in its rotation range without the need for mechanical end switches.

- Microprocessor-controlled Brushless DC Motor

Provides constant runtime independent of torque and increases life cycle by reducing wear.

## Installation

The New Joventa Standard Series of Electric Non Spring Return Actuators are mounted directly to the surface in any convenient orientation using the anti-rotation bracket (parts included with the actuator).

No additional linkages or couplers are required. Electrical connections are identified with numbers and colors permanently marked on the actuator and in a label on the cable.

The Actuators can be easily installed on dampers with round shafts or square shafts (see tables).
A push button disengages the internal gears letting the actuator to be manually override.

DA1.08Z / DA2.10 DM1.10

DM1.20 / DA2.20
DM1.35

| Shaft diameter mm | $\begin{aligned} & 23 \\ & 5 \\ & 5 \end{aligned}$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | MIN | MAX | MAX |  |  |

| $\bigcirc$ | 8 | 12.7 | 16 | 16 | 19 |
| Required wrench torque (Nm) | 14 |  |  |  |  |

## Mounting the Actuator

To mount the actuator, proceed as follows:

1. Position the damper until it is fully closed.
2. Bend or cut the anti-rotation bracket to fit the damper frame or duct as illustrated in figure below.

3. Load the actuator seal by rotating the shaft using the actuator (about 5 degrees).
4. Slip the actuator onto the shaft and fully tighten the set screw on the coupler.

(A)

5. Lightly tighten one side of the anti-rotation bracket to the mounting surface. Swing the anti-rotation bracket under the actuator until it reaches the middle of the slot on the bottom of the actuator.

6. Apply power long enough for the actuator to travel a full stroke. Verify that the actuator rotates freely throughout the range.

## Limiting the Rotation

The actuator is factory set for $95^{\circ}$ rotation, and its rotation range can be limited in $5^{\circ}$ increments to a minimum of $35^{\circ}$.
To limit the starting point proceed as follow:
If necessary, set the shaft coupler, as shown in the pictures, by pushing the manual override button (see A).
Remove the coupler pushing the little lever or clip on the bottom of the actuator (see B and C).
Rotate clockwise the coupler ( $15^{\circ}$ degree in the sample below) and insert it in the actuator (see D and E).
Every tooth of the coupler housing correspond to $5^{\circ}$ of rotation.
The actuator pointer shows the starting position. The actuator now perform a rotation from $15^{\circ}$ to $95^{\circ}$ (see F).
DA1.08Z / DA2.10 / DM1.10

DM1.20 / DA2.20 / DM1.35

## Accessing the DIP Switches

Locate the oval cover on the front of the unit and pull the cover outward. See further paragraph for viewing the DIP switches and LEDs meaning.

Remove the oval cover

## Automatic Signal Input Detection model

DM1.10, DM1.20 and DM1.35 Actuators operate with 24 VAC/DC to provide 10, 20 and 35 Nm rated torque.
The actuators can be used with on/off, floating, or proportional controllers in HVAC systems that are controlled by an electronic controller or positioner.

When the Actuators work in proportional mode, the actuator responds to 0 to 10 VDC or 2 to 10 VDC control signals. With the addition of a 500 ohm resistor, the actuator responds to a 0 to 20 mA or 4 to 20 mA signal.
A 0 to 10 VDC or 2 to 10 VDC feedback signal indicates position.

## DIP Switches Settings

| Command Signal | Feedback Signal | Setting User Interface |  |
| :---: | :---: | :---: | :---: |
| 0 to 10 VDC <br> 24 VAC <br> Floating or ON/OFF | $\begin{gathered} \text { Direct } \\ 0 \text { to } 10 \text { VDC } \end{gathered}$ |  |  |
| 0 to 10 VDC <br> 24 VAC <br> Floating or ON/OFF | Reverse 0 to 10 VDC |  |  |
| $2 \text { to } 10 \text { VDC }$ <br> 24 VAC <br> Floating or ON/OFF | $\begin{gathered} \text { Direct } \\ 2 \text { to } 10 \text { VDC } \end{gathered}$ |  |  |
| $2 \text { to } 10 \text { VDC }$ $24 \text { VAC }$ <br> Floating or ON/OFF | Reverse 2 to 10 VDC |  |  |

## Auto Calibration Mode

The actuator enters auto calibration mode and positions the coupler to the maximum and minimum end stops to identify the range of travel. To complete the auto calibration process, press Enter/Autocal until all three LEDs are on.

## Setting the SPAN and OFFSET Proportional Command Signal to Other Values

The actuator has the possibility to adjust the input signal changing the working range and the starting point of the signal. The valid Offset values are 0 to 10 VDC and the valid Span values are 2 to 10 VDC. Adjusting span and offset the feedback voltage of the actuator is automatically set as 2-10 VDC.

## Example

| Command <br> Signal | Feedback <br> Signal | Setting User Interface |
| :---: | :---: | :---: |
| Offset $=5$ <br> Span $=7$ | Active <br> $2-10 \mathrm{VDC}$ |  |

1. Connect a digital multimeter between the orange (feedback) and black (common) wires. See Wiring for more wiring information.
2. Press Enter/Autocal.

Note: To adjust the span and offset, press but not hold Enter/Autocal.
Holding Enter/Autocal for longer than three seconds triggers an autocal.
The Offset Adj. LED turns on, and the multimeter displays the current offset value.
3. Press INC.

The Offset Adj. LED flashes. The voltage reading on the multimeter increases 0.5 VDC each time you press the button. Press INC. until you reach the desired voltage.
Once you press INC., if no further action is required, the Offset Adj. LED stops flashing after 10 seconds. The actuator exits the program mode and the original offset value remains unchanged.
4. Press Enter/Autocal.

The Offset Adj. LED turns off indicating that the desired Offset Adj. value was recorded. The Span Adj. turns on, and the multimeter displays the present SPAN value.
5. Press INC.

The Span Adj. LED flashes. The voltage reading on the multimeter increases by 0.5 VDC each time you press the button. Press INC. until you reach the desired voltage.
Once you press INC., if no further action is required, the Offset and Adj. LED stops flashing after 10 seconds. The actuator exits the program mode and the original offset value remains unchanged.
6. Press Enter/Autocal.

The Span Adj. LED turns off indicating that the desired Span Adj. setting is recored, and the actuator exits the program mode.

## Reading the SPAN and OFFSET Proportional Command Signal Voltage Settings

1. Connect a digital multimeter between the orange (feedback) and black (common) wires. See Wiring for more wiring information.
2. Press Enter/Autocal.

The Offset Adj. LED turns on, and the multimeter displays the current offset value.

## IMPORTANT: Do not press INC. Otherwise your observed offset voltage setting will change.

## 3. Press Enter/Autocal.

The Offset Adj. LED turns off, the Span Adj. LED turns on, and the multimeter displays the present SPAN value.
IMPORTANT: Do not press INC. Otherwise your observed SPAN voltage setting will change.

## 5. Press Enter/Autocal.

The Span Adj. LED turns off.

## Clearing the SPAN and OFFSET Proportional Command Signal Voltage Setting

Cycle DIP switch two between 2 to 10 and 0 to 10. The active setting is the final state of DIP switch two.

## Line voltage models and High Speed models (ON/OFF and Floating)

The DA2.xx operates with AC 100 to 240 V (AC 85 to 264 V ). The actuator is design to be used with ON/OFF or Floating controls in HVAC systems.

The DA1.08Z operates with 24 V DC/AC.
DIP Switch Settings

| Command Signal | Setting User Interface |
| :---: | :---: |
| Reverse |  |
| Direct | $\underset{\substack{\text { Iutot } \\ \text { used }}}{\text { RA }}$ |

## Ordering Informations

| Code | Description |
| :--- | :--- |
| DA1.08z | 8 Nm, ON/OFF and Floating control, 24 V AC/DC power supply, 8 seconds run time |
| DA2.10 | $10 \mathrm{Nm}, \mathrm{ON} / \mathrm{OFF}$ and Floating control, AC 100 to $240 \mathrm{~V}(\mathrm{AC} 85$ to 264 V ) power supply, 35 seconds run time |
| DM1.10 | 10 Nm, All-in-one ON/OFF, Floating and Proportional control, 24 V AC/DC power supply, 35 seconds run time |
| DM1.20 | 20 Nm, All-in-one ON/OFF, Floating and Proportional control, 24 V AC/DC power supply, 90 seconds run time |
| DA2.20 | 20 Nm, ON/OFF and Floating control, AC 100 to $240 \mathrm{~V}(\mathrm{AC} 85$ to 264 V$)$ power supply, 90 seconds run time |
| DM1.35 | 35 Nm, All-in-one ON/OFF, Floating and Proportional control, 24 V AC/DC power supply, 150 seconds run time |

DM1.20 / DA2.20 / DM1.35

## Accessories

The New Joventa Standard line has several kit and accessories that can be ordered separately and mounted on site.

| Code Number | Description |
| :--- | :--- |
| M9000-322 | NEMA 4x, IP66 Weathershield Kit for damper application of DxD, DM1.10, DxFx.03 and DxFx.08 Series Electric <br> Actuators (quantity 1) |
| M9000-400 | Jackshaft Linkage Adapter Kit (quantity 1) |
| M9000-561 | Thermal Barrier Kit. Extends the BxD, BMS1.10, BxF.03 and BxF.08 Series Electric Non-Spring Return Actuators <br> applications to include low pressure steam (quantity 1) |
| M9000-604 | Replacement Anti-Rotation Bracket Kit for DM1.10, DxFx.03, DxFx.08, DxFx.20 Series Electric Actuators |
| M9000-606 | Position indicator for Auxiliary Switches and Feedback Potentiometer Kits (quantity 5) |
| JOV-SW1 | Auxiliary Switch Kit (one single-pole, double-throw) |
| J0V-SW2 | Auxiliary Switch Kit (two single-pole, double-throw) |
| M9300-100 | Threaded Conduit Adapters for 12.7 mm (1/2 in.) electrician's fittings (quantity 5) |
| M9300-140 | External Auxiliary Feedback Potentiometer 140k Ohm |
| M9000-151 | Remote Mounting Kit, with crank arm and damper linkage for Damper Series Actuators |
| M9300-1K | External Auxiliary Feedback Potentiometer 1k Ohm |
| M9300-2K | External Auxiliary Feedback Potentiometer 2k Ohm |
| M9300-10K | External Auxiliary Feedback Potentiometer 10k Ohm |
| M9310-600 | Standard Coupler Kit, DM1.10 Series (9.5 to 19 mm - 3/8 to 3/4 in.) (9.5 to 16 mm - 3/8 to 5/8 in.) (quantity 1) |

## Auxiliary Switch \& Potentiometer Feedback Kit

Mounting the kit, a connection is created between the shaft hub of the actuator and the kit.
The position of the actuator is transferred to the gear's kit.

1. Before mounting the kit, rotate the actuator and the kit itself counter clock wise till the end position in order to align the holes on the coupler with the pins on the kit and snap the kit onto the M9300 actuators.

2. To remove the kit Place a screwdriver underneath the tab on each side of the actuator and firmly pull back the tab.

## Auxiliary switches kits

The auxiliary switches kits are used to notify starting and end position or to perform switching functions in any angular position. The switching points can be adjust by means of a dial.

M9300-1

M9300-2

## Feedback potentiometer kits

The feedback potentiometers are used as damper position indicators or as positioners for actuators operated in parallel.
